

iSeries Work Management

Duration: One Day

Prerequisites: An understanding of the iSeries concepts of subsystems, job queues, output queues, job descriptions and use profiles. Students must be comfortable with the iSeries operating environment.

Audience: This course is designed for operators and supervisors who are concerned with minimizing response time and throughput.

Description: The purpose of this course is to enable students to use work management tools to set up, tune, and modify the flow of work to fit their environment.

Course Content:

- The basic tuning principles
- Processes for integrating work management functions
- Use of work management tools to maximize application performance
