

iSeries Introduction to Java

Duration: One Day

Prerequisites: iSeries Basic Overview & PDM. Students should have a basic understanding of the iSeries operating environment and programming concepts.

Audience: This course is designed for programmers who are beginning to learn the Java programming language. The Introduction to Java class is ideal for programmers new to Java that realize they need to understand the basics of the language before delving deeper into WebSphere.

Description: Java is a powerful and popular language frequently used in both Intra-net and Inter-net based applications. This class lays a foundation for future Java courses by introducing Java fundamentals such as Object Orientation, Classes, Properties, Methods, Inheritance, and more.

Course Content:

- iSeries Implementation of Java
- Java Class objects
- Variables and data types
- Logical Operators
- Java Methods
- String Handling
- Array Handling
- Database access with JDBC
